OVERVIEW

Psychrometrics (Demo Version) is a MATLAB Functions Library that allows the calculation of thermodynamic and psychrometric properties of humid air, dry air, water, water vapor and ice based entirely on the mathematical formulation of the 2009 ASHRAE Handbook of Fundamentals.

This Demo Version includes limitations in the range of the input variables that are included.

REQUIREMENTS

The following are the requirements in order to install and utilize **Psychrometrics (Demo Version)**. Please note that if your operating system does not include the corresponding C++ Runtime Library it will be installed by the installation file.

OPERATING SYSTEM	
Windows OS	Windows 7 Windows 8 Windows 8.1 Windows 10

	MINIMUM VERSION	REQUIREMENT
MATLAB	R2009a (7.8)	32-bit or 64-bit

	BITNESS	REQUIREMENT
C++ Runtime Library	32-bit	Microsoft Visual C++ 2012 Redistributable (32-bit) - 11.0.6.61030
	64-bit	Microsoft Visual C++ 2012 Redistributable (64-bit) - 11.0.6.61030

- Please note that the minimum supported Windows OS is Windows 7, and the minimum supported MATLAB version is R2009a (7.8).

Psychrometrics (Demo Version) is available as a 32-bit or 64-bit Functions Library in accordance with the MATLAB version. Please select the right installation file that matches your MATLAB installation.

Installation File	MATLAB version
Psychrometrics_MatlabDemo_x86_Setup	32-bit
Psychrometrics_MatlabDemo_x64_Setup	64-bit

INSTALLATION

Unzip the file that corresponds to your MATLAB version. Double-click on the _Setup.exe file that is located on the unzipped directory and follow the screen instructions.

Once the function libraries are installed (all files with extension .mexw32 for a 32-bit installation or .mexw64 for a 64-bit installation and all files with extension .dll), you need to add this directory to your working PATH environment in MATLAB.

Note : When including another working directory different from the original installation, be sure to include all files with extension .dll. These files are necessary for the numerical evaluation of the library functions.

Please check www.fluidika.com for information on how to add a working directory to your PATH environment in MATLAB.

You need to have **Administrator** privileges on your computer in order to install the software

LIBRARY FUNCTIONS

Psychrometrics (Demo Version) MATLAB Functions Library is composed of User Defined Functions (UDF) that take parameters (string and/or double) and returns a double (number).

If incorrect or out of bounds input parameters are entered, the function will return the value of **-9999.**

Table 1 shows the functions defined as a combinations of input properties. Properties calculated based on these functions are described in Table 5.

Functions that return a single property are described in Tables 2 and 3; their properties and units are shown in Table 6.
